Abstract

The presentation is about working on MaemoWebDAV project. Main purpose of the project is creation of programs that can organize shared access to files on mobile devices. Maemo is used as a working platform and WebDAV data exchange protocol is chosen because it is simple and portable. The report contains different data exchange protocols comparison in the scope of current task and the solution overview. Also there will be a short demo in the end of the talk.

Index Terms: MAEMO, WebDAV.
